CrossPay PRD

Product Requirements Document (PRD) – CrossPay

1. Product Overview

Product Name:

CrossPay

Product Type:

Cross-Border Payment Platform (Mobile-first)

One-liner Description:

CrossPay empowers freelancers and gig workers in emerging markets to receive international payments instantly, securely, and at low cost, with local wallet and currency support.

Problem Statement:

Freelancers and gig workers in emerging markets face high fees, long delays, and limited access to financial institutions when receiving payments from international clients. CrossPay addresses this gap with a frictionless, mobile-first payment app.

Target Users / Personas:

- Unbanked gig workers in Nigeria, India, the Philippines, and LATAM
- Digital freelancers working through platforms like Fiverr, Upwork, and Toptal
- Cross-border microentrepreneurs and online service providers

---

2. User Research & Market Discovery

User Insights:

- 60% of gig workers in Sub-Saharan Africa rely on international clients
- Existing options like SWIFT, PayPal are expensive or unavailable locally

- Users prioritize trust, ease of use, and payout speed

Personas:

1. **Aisha**, 27, Lagos-based web developer on Upwork

- Pain point: PayPal not supported; bank wire takes 5-7 days

- Needs: Fast, reliable, low-cost payments

2. **Carlos**, 32, Buenos Aires-based translator

- Pain point: High Payoneer withdrawal fees

- Needs: Local wallet, better exchange rate

Market Opportunity:

- 77M+ digital freelancers globally

- $1.5T+ global remittance market

- Rapid growth in digital wallets in developing economies

Competitive Analysis:

Competitor	Strengths	Weaknesses
Payoneer	Global presence	High fees, slow in some markets
Wise	Transparent rates	Limited payout partners
Crypto solutions	Fast, borderless	Regulatory uncertainty, learning curve
CrossPay	Mobile-first, local wallet & KYC-ready	New entrant

3. Goals & KPIs

Primary Goals:

- Build trust and transparency for financial transactions

- Enable fast and compliant cross-border payouts

- Grow to 1M users in 24 months

Key Metrics (KPIs):

- Activation rate: % of signups who receive their first payment

- Payout time: Avg. minutes to funds delivered
- CAC vs. LTV
- Churn rate
- Regulatory incidents or fraud cases
- User NPS & support satisfaction

---

4. Product Scope

Core Features:

Feature	Description	Priority
Multi-currency wallet	Store, convert, withdraw funds in local currencies	High
KYC onboarding	Partner-integrated identity verification	High
Payment request & invoices	Allow users to request or track payments	High
Instant transfers	API-based instant payouts	High
Notifications	Payment status, compliance updates	Medium
Transaction analytics	Earnings and expense history	Medium
Referral rewards	Incentivize user growth	Low

Out of Scope (for V1):

- Lending/credit
- Crypto support
- Corporate/enterprise accounts

---

5. UX & Design Considerations

- Clean, mobile-first interface optimized for low bandwidth
- Use financial language users understand (e.g., “Request payment” instead of “Generate invoice”)
- Cues for transaction trust (badges, time estimates, compliance messages)

- Accessible fonts and contrast for rural/differently-abled users
- Languages: English, Spanish, Hindi, Tagalog, Swahili

Wireframes/Mockups:

---

6. Technical Requirements

Platform(s):

iOS

Android

API for payout partners

Architecture / Dependencies:

- Payment rails: Flutterwave, Rapyd, Stripe Connect
- KYC partner: Jumio
- Wallet provider: MangoPay
- Compliance screening: Alloy

Security Requirements:

- PCI-DSS, GDPR, PSD2 compliant
- Data encryption at rest and transit
- Device binding & biometric access
- Fraud scoring engine

---

7. Development & Testing

Approach:

Agile with biweekly sprints and sprint reviews

Testing Strategy:

- Unit + Integration Testing
- UAT with 100 pilot users per region

- A/B test onboarding flows
- Penetration Testing by external vendor

Release Plan:

- Beta launch in Nigeria and the Philippines
- Expand to India and LATAM
- Feedback loop via in-app survey + CS dashboard

---

8. Go-To-Market (GTM) Strategy

Target Segments:

- Freelancers on digital platforms
- Remote professionals in outsourcing firms
- Creators on platforms like YouTube or TikTok

Channels:

- Influencer marketing
- Gig platform partnerships
- WhatsApp/Telegram groups
- Paid search and regional fintech events

Localization & Compliance:

- Register local entities in target countries
- Comply with remittance & KYC rules in each market

User Enablement:

- Help center with videos and FAQs
- In-app onboarding coach
- Live chat via Intercom or ManyChat *(Recommended Tool)* (Sponsored)

---

9. Post-Launch & Analytics

Monitoring Metrics:

- Activation funnel
- KYC pass rates
- Median payout speed
- Daily Active Users
- Feature adoption: e.g., invoices, currency conversion

Iteration Plan:

- Phase 2: Add crypto payout option (USDT)
- Phase 3: Add lending based on transaction history
- Run quarterly NPS and A/B test feature variants

---

10. Stakeholders

Collaborators:

- PM: You
- Engineering Lead: TBA
- UX Designer: [Insert name]
- Legal/Compliance: [Insert name]
- Data & Analytics: [Insert name]
- GTM/Marketing: [Insert name]

---

11. Approvals & Status

Stakeholder	Role	Status	Notes
Product Owner	PM		Scope locked
Engineering	Tech Lead		Estimating backend needs
Legal	Compliance		Reviewed KYC flow
Marketing	GTM		Finalizing budget
